Project experience

BeeHive APP

2022.1-2022.4

Project Description:

The software is a multi-platform travel APP developed for Android and IOS. You can get the travel information you want through the home page and destination, and browse the suggestions or guides left by others. You can also go to the mall to buy a package tour that you want to travel to. You can edit your personal information and post what you see and hear in the personal center.

Technical description:

HTML5 and CSS3 are used for page layout, and JavaScript is used to complete the page interaction and communication. Among them, the home page, destination and mall use waterfall flow to complete the layout of the content, and use the realization of the page animation. The use of ajax+json way to achieve the user registration login, and to determine whether the account has been registered, the password is correct and so on a series of class judgment.

Responsibility description: Responsible for the login registration module, the use of HTML5 and CSS3 layout and page implementation, and the use of JavaScript to complete the interaction of the page, the use of ajax+json way to achieve the user registration login.

Smart item query platform -- escape from Tarkov

2021.1-2021.3

Project Description:

The project is mainly used to provide users with the loot available in the game for browsing query, and add the in-game value, exchange items and required quantity. It can be searched by item name and users can log into their Tarkov account to save the items they want. During the holidays, an email will be sent to the user's email address to wish them a happy holiday.

Technology application:

This project is independently developed by individuals. HTML5 and CSS3 are used for page layout, and JavaScript is used to complete page interaction and communication. Use CSS animation to complete the navigation bar somersault cloud effect. Use ajax+json way to achieve the user's registration and login.
